Computer

Chap- 3,Summary

Mail merge is a feature required to send letters with similar information to a number of people who reside at different locations. Mail merge feature combines two documents, one is Main Document and the other is Data Source which is associated with the main document.
Main document contains the text you wish to send to all the selected addresses.
Data Source consists of mailing list, for example, name, address, city, PIN, telephone no. etc. which is inserted into the main document.

SCIENCE

Students i have provided you remaining questions/answers of lesson-5
"kinds of materials" (see in whatsapp gp) . Note down these question/answers in your science notebook and also learn them.Also write summary of this chapter.
